

Equipping Minds®

Cognitive Development Curriculum

2026 Edition

Dr. Carol T. Brown, Ed.D

A day-by-day curriculum for cognitive development that builds working memory, processing speed, auditory and visual processing, attention, logic, comprehension, and executive functioning through mediated learning. Rooted in a 3,400-year scholarly tradition spanning Ancient Hebrew, Aristotle, Feuerstein, and Stroop. Includes 600+ progressive exercises designed to grow increasingly challenging as the learner progresses, classroom connection activities, reflex and vision screenings, instructional methods, and session formats for individual, group, and classroom settings.

Designed for use in the regular, gifted, or special education classroom, learning center, clinic, dyslexia camp, teletherapy, memory care, special-needs ministries for children and adults, or the home environment.

Backed by peer-reviewed and independently replicated research demonstrating gains in verbal reasoning, nonverbal reasoning, reading, mathematics, science, and processing speed across ages 9–68. Used successfully with learners ages 2–92.

Carol T. Brown, Ed.D.
